ECONOMETRICS II
Time Series Econometrics

Course Syllabus

Professor: Norman Swanson, 304 NJH: 848-932-7432.
Class Location & Time: HH 705 - Monday 10:20-1:20
Email: nswanson@econ.rutgers.edu
Course Website: http://econweb.rutgers.edu/nswanson/econ508msmf.html
Office Hours: Swanson - M 1:30-2:30 (or by appointment)
Teaching Assistant: Chun Yao (cyao@economics.rutgers.edu - office hours tba)
Teaching Assistant: Weijia Peng (wp134@economics.rutgers.edu - office hours tba)

Learning Goals and Assessment:

Departmental learning goals and assessment for graduate classes, and in general for the economics doctoral program, are detailed at the following website:

http://economics.rutgers.edu/graduate/program/learning-goals

Additionally, departmental learning goals and assessment for masters students are detailed at the following website:

http://economics.rutgers.edu/graduate/program/learning-goals-masters

In this course, and as fully detailed at the above referenced documents, learning goals and assessment will include:

(i) Attain marked ability, scholarship, research and leadership skills in economics, with specialization in selected sub-disciplines
(ii) Engage in and conduct original research
(iii) Prepare to be professionals in careers that require training at the highest levels in economics and selected sub-disciplines
Additionally, note that your course grade will be based on the results from 1 in class paper presentation (35%), 1 in class midterm examination (35%), and a final project (30%), or as to be determined by professor. The main focus of this course is on time series econometrics. Throughout the course, we will discuss and review topics including LM, LR, and Wald tests, ARIMA models, and maximum likelihood estimation. We will also cover VAR models, unit roots, cointegration, spurious regression, and Granger causality.

More broadly, focus will be on estimation, testing, and model selection. Emphasis will also be placed on Monte Carlo methods and bootstrap techniques. Finally, we will discuss other time series topics including forecasting, continuous time financial models, bootstrapping, Monte Carlo methods, and GARCH. The overall focus of the course will be on financial and macro econometrics

**MSMF Students:** This course covers the same broad content as Econ 508 taught to PhD Economics students. The depth of coverage will vary, as will the course requirements, as appropriate for the class.

The course outline is meant only as a guide, and topic coverage and length of coverage may vary from the time allotted in the syllabus. After finishing each main topic I will summarize completely what we have learned and what you will be required to know for the test(s). Note that most advanced texts in econometrics cover all or most of the topics in the course, so that you may essentially use texts other than those listed. Finally, note that the course is meant to be self-contained, in the sense that full knowledge of class lecture material is essentially sufficient for testing purposes, and texts need be used only for extra study and clarification.

**Disclaimer**

Qualified persons with disabilities are encouraged to participate in all programs and activities at this university. If you anticipate needing any type of accommodation in this course or have questions about physical access, please tell the instructor as soon as possible.
Textbooks

* required text.

Course Notes

Swanson, Norman R. and Valentina Corradi: **Prediction and Simulation Based Specification Testing and Model Selection**

Swanson, Norman R.: **Economics 508 Lecture Notes** (available on Sakai, not for distribution)
Course Outline

PART I. ARIMA Models (week 1)
   (i) AR, MA, and ARMA Models
   (ii) Specification, Estimation and Testing
       Readings: (H) Chapters 3,5, (GN) various.

PART II. Testing (week 2/3)
   (i) Testing: F-tests, $\chi^2$ tests and F approximations thereof - LM, LR, and Wald Tests, etc.
   (ii) Nonlinearity, Serial Correlation, Heteroskedasticity, ARCH, Predictive Accuracy, Causality, and Related Tests
       Readings: (G) various, (H) Chapter 5, (W) Chapter IV.2, (DM) Chapter 3.6 and various.

PART III. Nonstationarity Versus Stationarity (week 4)
   (i) Random Walks and Spurious Regression
   (ii) Stochastic and Deterministic Trends - Trend vs. Difference Stationarity
   (iv) Unit Root Testing

PART IV. Vector Processes (week 5)
   (i) VARs: Estimation and Testing
   (ii) VARs: Interpretation - IRFs and FEVDs
   (iii) Cointegration - Introduction and Motivation
   (iv) Error-Correction Models: Estimation and Testing
       Readings: (H) Chapters 10,11,18,19,20 (DM) Chapter 20, (GN) Chapter 8.

PART V. Introduction to Forecasting (week 6-10) - see online "Forecasting Lecture Notes"
   (i) Forecasting Time Series
   (ii) Model Selection
   (iii) Testing
       Readings: (GN) all, (H) Chapter 4. Corradi, Valentina and Norman R. Swanson, 2006,
       Predictive Density Evaluation, in: Handbook of Economic Forecasting, eds. Clive W.J. Granger,
       Graham Elliot and Allan Timmerman, Elsevier, Amsterdam.

PART VI. Introduction to Monte Carlo Methods
   (i) Experimental Design
   (ii) Test and Estimator Assessment Methods
       Readings: (DM) Chapter 21.

PART VII. Introduction to Financial Econometrics
   (i) Single Factor Models - CIR, Geometric Brownian Motion and Related Models
   (ii) Stochastic Volatility and other multi-factor and multi-dimensional Processes
   (iii) Estimation (GMM, SGMM, ccf methods)
   (iv) Specification Testing
       Readings: (H) Chapter 14. See also:

PART VIII. Further Topics; as time permits and throughout course
   (i) Generalized Autoregressive Conditional Heteroskedasticity (GARCH) Models
   (ii) Bootstrapping Techniques
   (iii) Nonparametric Techniques
   Readings: (GT) all, (H) Chapters 13,14,21, (DM) Chapter 16.

PART IX. Further Topics; as time permits and throughout course
   (o) Project discussion.
   (i) TAR, STAR, LSTAR, and ESTAR Models
   (ii) Nonlinear Cointegration
   (iii) Neural Network Models
   (iv) Panel Data Modeling:
       Fixed Effects Models, Random Effects Models, Simultaneity Problems
   Readings: to be announced
